

## Ethics Assignment #11: Fair and Responsible AI

**Due: Tuesday, 11.15.22, by 1:00 pm**

### Background

---

The number of AI applications continues to climb, and it is estimated that by 2025, the revenue for AI software will reach \$126B worldwide. AI applications are typically meant for the good of humankind, but bad actors can modify or create AI software for nefarious uses. In our lecture on AI, we'll briefly introduce AI, and we'll discuss some of the uses of AI as well as many of the concerns that have been raised. We'll also cover some of the standards and regulations which have been proposed by companies, states, and countries.

### Learning Goals

---

By the end of the lecture, you will:

- understand some of the concerns and issues over the use of AI
- understand what people are doing to address some of these concerns and issues

### Assignment

---

Read the five principles of the [AI Bill of Rights](#). For each principle, indicate why you are for or against it and why.

Submit a pdf of your work via Canvas by 1:00 pm on Tuesday, 11.15.22.
